DETAILED ACTION

Information Disclosure Statement

1. The references listed in the information disclosure statements submitted on 9/4/01 has been considered by the examiner (see attached PTO-1449).

Claim Objections

2. Claim 12 is objected to because of the following informalities: the entire sentence/paragraph "said interfering signal." on page 25 should be deleted.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-2, 6, 8-10, 12 are rejected under 35 U.S.C. 102(e) as being anticipated by **Waight (US 6,057,876)**.

The applied reference has a common inventor and assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e)

Art Unit: 2685

might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1-2, 6, 8-10, 12, **Waight** discloses a communication module (CATV set top terminal) for converting an input RF signal to a desired output signal wherein the first and second LO frequencies are adjusted based on the delta value calculated from the interfering oscillator difference beat frequencies (OBDFs) exist within the bandwidth of the desired RF output signal which would include all the claimed limitations (see entire document or claims 1-6).

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-10, 12 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No.

6,057,876. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both direct to a communication module (CATV set top terminal) for converting an input RF signal to a desired output signal wherein the first and second LO frequencies are adjusted based on the delta value calculated from the interfering oscillator difference beat frequencies (OBDFs) exist within the bandwidth of the desired RF output signal.

6. Claim 11 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,057,876 in view of Applicant's admitted prior art (Fig. 7), hereafter AAPA.

Regarding claim 11, U.S. Patent No. 6,057,876 discloses all the claimed limitations except for a first LO signal. However, using an oscillator for modulating an audio baseband signal would have been obvious to one of ordinary skill in the art as disclosed by AAPA (see Fig. 7). Therefore, it would have been obvious to one skill in the art at the time the invention was made to incorporate the above teaching of **AAPA** to **6,057,876** for providing a first LO as claimed, so that the audio signal could be converted to the frequency bandwidth of a video signal for simultaneous processing.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- **Birleson** (US 5,847,612), Interference-free broadband television tuner.
- **Yokoyama** (US 5,875,389), SSB radio receiver.
